

An Internship Report Of Frontend Developer

Submitted

To

School of Computer Science and Engineering

IILM University, Greater Noida, U.P.

In partial fulfilment of the requirement of degree of

B.Tech CSE

By

Roll Number of Student: **25SCS1003003241**

Name of Student: MOULIK SAHU

Batch: 2026-27

2026-27

CANDIDATE'S DECLARATION

I, **MOULIK SAHU** hereby declare that the internship report titled "**FRONTEND DEVELOPER** " has been completed by me to fulfil the requirement for the award of the degree of Bachelor of Technology in CSE. All the references have been quoted and I have not taken as such any material from any other source. I affirm to you that this report is my own and has not been submitted to any other institute for any degree/diploma requirement and further I shall be solely responsible for any kind of copyright violation in this regard.

Signature Moulik Sahu

Student Name: MOULIK SAHU

Roll No: **25SCS1003003241**

ACKNOWLEDGEMENT

I am using this opportunity to express my gratitude to everyone who supported me throughout the Internship Program. I am thankful for their aspiring guidance, invaluable constructive criticism and friendly advice during this work. I am sincerely grateful to them for sharing their truthful and illuminating views on a number of issues related to this work.

I express my gratitude to my parents for their blessings.

Signature Moulik Sahu

Student Name: **MOULIK SAHU**

Roll No: **25SCS1003003241**

3. INTERNSHIP COMPLETION CERTIFICATE

CHAPTER 4 – PROJECT DESCRIPTION

4.1 Introduction

During my internship as a Frontend Development Intern at Flair Mark Entertainments, I worked on designing and developing responsive and interactive web interfaces. The primary focus of the internship was to understand the practical application of frontend development concepts and implement them in a real-world project environment.

The project involved developing a modern entertainment and event-oriented website that provides users with an attractive and easy-to-use interface for exploring events, artists, entertainment categories, and related information.

The frontend was developed using React.js, with Vite used as the development and build tool and CSS used for styling and responsive design.

4.2 Organization Profile

Flair Mark Entertainments is the organization where I completed my internship. My work was associated with the frontend development aspect of the organization's digital platform. The internship provided practical exposure to the development of professional web interfaces and the use of modern frontend technologies.

For the final submitted report, the official organization profile, services, address, website, and other company-specific information should be inserted here from the material provided by Flair Mark Entertainments.

4.3 Problem Statement

In the entertainment industry, users need an attractive and convenient digital platform through which they can easily discover events, artists, entertainment categories, and other relevant information. A poorly designed website can make it difficult for users to navigate content, find relevant events, or interact with available features.

Therefore, the problem addressed by this project was to design and develop a responsive, interactive, and user-friendly entertainment website that enables users to easily explore events and entertainment-related information through a modern web interface.

4.4 Project Objectives

Develop a responsive website that works effectively on desktop, tablet, and mobile devices.

Create an attractive and consistent user interface suitable for an entertainment-oriented platform.

Build reusable React components for different sections of the website.

Improve user navigation through clear menus and organized content.

Present events and entertainment content using visually structured cards and sections.

Implement search and category-filter interfaces where required.

Add interactive elements such as buttons, forms, menus, and modal-style interactions.

Develop practical skills in React.js, JavaScript, CSS, Vite, Git, and GitHub.

4.5 Scope of the Project

The scope of the project covers the development of the frontend interface of an entertainment and event-oriented website.

Functional Scope

Home section for introducing the platform and highlighting important content.

Event section for displaying entertainment events using organized cards.

Category section/filtering interface for organizing content.

Search interface for locating specific events or content.

Artist/content section for presenting entertainment-related profiles or information.

Gallery section for presenting event or entertainment images.

About section for information about the organization.

News/updates section for announcements or relevant information.

Newsletter/contact form interface where required.

Interactive modal or action interface where required.

Technical Scope

Component-based React development.

Responsive CSS layouts.

JavaScript event handling and state-based interaction.

Conditional rendering where required.

Frontend testing and debugging.

Git/GitHub-based version control.

Limitations

The project primarily focuses on the frontend. Backend services such as authentication, database management, payment processing, real-time ticket booking, and server-side APIs are outside the primary scope unless they were specifically implemented during the internship.

4.6 Technologies and Tools Used

Technology / Tool	Use in Project
HTML5	Web-page structure and semantic elements
CSS3	Styling, layout, responsiveness and visual design
JavaScript	Application logic and interaction
React.js	Reusable UI components
Vite	Development and build environment
Git	Version control
GitHub	Repository hosting and project management
VS Code	Development and source-code editing

Table 4.1 – Technologies and Tools Used in the Project

4.7 System Architecture

The project follows a component-based frontend architecture. The user accesses the application through a web browser. The browser loads the React application, which contains reusable components responsible for individual parts of the user interface.

Figure 4.1 – High-Level Frontend System Architecture

Component Structure

Figure 4.2 – React Component Structure

4.8 Methodology

Phase 1 – Requirement Analysis

The first step was to understand the website requirements, target users, content structure, responsive needs, and expected interactions.

Phase 2 – Planning

The website structure was planned by identifying the major sections and deciding how the interface would be divided into reusable React components.

Phase 3 – UI Design

The interface was designed with emphasis on clear navigation, visual hierarchy, consistent spacing, readable typography, attractive cards, and responsive layouts.

Phase 4 – Component Development

The application was divided into reusable React components. This approach improves maintainability, reusability, and organization of the source code.

Phase 5 – Styling

CSS was implemented for layouts, cards, buttons, navigation, spacing, typography, responsive behavior, and visual effects.

Phase 6 – Functionality

Interactive functionality such as navigation, search, filtering, button actions, forms, and modal-style interactions was implemented according to the project requirements.

Phase 7 – Testing

The website was tested for UI issues, broken layouts, incorrect interactions, responsiveness, and browser-related issues.

Phase 8 – Debugging

Frontend errors were analyzed using browser developer tools and corrected through changes to React components, JavaScript logic, and CSS.

Phase 9 – Version Control

Git was used to track project changes and GitHub was used to maintain the project repository and share the source code.

4.9 Expected Outcomes

Technical Outcomes

Responsive frontend interface.

Reusable React components.

Interactive user-interface elements.

Search and filtering interfaces where required.

Organized event/content presentation.

Mobile-friendly design.

Clean and maintainable frontend code.

Improved navigation and user interaction.

Learning Outcomes

Practical knowledge of React.js and component-based development.

Improved JavaScript programming and event-handling skills.

Better understanding of HTML and CSS.

Experience with Vite-based development.

Experience with Git and GitHub.

Understanding of responsive design and UI/UX principles.

Improved debugging and testing skills.

Better understanding of professional software-development workflow.

Professional Outcomes

The internship helped me understand how software-development concepts learned in academics are applied in a professional environment. It improved my problem-solving, communication, collaboration, time-management, debugging, and project-development skills.
